There are two kinds of packets: Junior and Senior. Buth packet types contain a common header structure, followed by differing data sections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  note: windows.h must have already been included.

Driver Version 4.11.08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rev 1.55 11 May 1993 14:39:36 JOELG
Driver version 4.11:16
Added Shuser_Open1 and SDVoc_Open1 functions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rev 1.56 13 May 1993 16:22:26
Driver version 4.11.21
Cleaned up tabbing by removing all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The SDAPI, Wheader file was restrictined to prepare it for release as part of the Dragon Voicelools project. This involved a large amount of reformatting and moving of function declarations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         In addition, the following functions have been added to ordering in vocabulary files.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The following functions are not being released as part of Voicelools and have been soved into SDAPINH.H. these functions are still available for influses use, although you may find the simplier forms developed for the tool kit to be easier to use:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the fallowing functions are new in this version:

                                                                                                                                                                                                                                                                                                                                                                             No transition has been defined. This can be used for words and states for which the default transition should be used. The default transition is determined by searching rectralizely up the including states until a defined transition is found, it is treated in found, it is treated in found.
                                                                                                                                                                                                       Call a state, pushing the specified return state onto the stack. When a return is executed, the return state becomes the current recognition state.
                                                                                                                                                                                                                                                                                     Go to a specific state.
                                                                                                                                                                                                                                                                                                                       Stay in the current recognition state.

When a raturn is executed, the current state becomes again the recognition state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This opcode is only valid for included states. This causes the call to occur BEFORE considering transitions specific to the word.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pop the next state off of the stack. States are pushed onto the stack via CALL and CALL_MOP transitions.

To access this control, use the scrollbar functions as if this was a Windows scrollbar control. You can also directly send the window LMT\_USER messages. The stide control will do nothing with its window caption, so the caption need not be set. this is a stide control which is similar to a ScrottBar control control is designed to be used in the options dialog. PROJECT: Dragombictate for CREATED: February 4, 1994 AUTHOR: Joel Gould the slide control is available from the Barland resource workshop if you install the control.dll. (C) Copyright Dragon Systems, Inc. 1993-1994 All Rights Reserved. the following style bits are supported: .. DRAGON SYSTEMS CONFIDENTIAL .. slidectl.h : dragon horizontal slide control MODIFICATIONS: 10 00 1151: then query its value. this control will woll send way SROLL and was MSCROLL messages. Instead, it will send a way COMIROL message when its value changes and you must US\_VISIBLE
US\_TABSIOP
US\_DISABLED
US\_GROUP
These are the standard control styles for dialog boxes. GetScrollRange( hAnd, SB\_CTL, BrWin, BrWax )

### Claims

5

15

25

35

- 1. A method of speech recognition including:
  - recognizing a first utterance.
    recognizing a second utterance having information that is related to said first utterance. and
    determining the most probable first and second utterances based on stored information about valid relationships between possible first and second utterances.
- The method of claim 1 further including determining validity of one of the recognized utterances and including an
  invalid utterance in a list of possible utterances for comparison with possible utterances in said list.
  - 3. The method of claim 1 wherein determining the most probable utterances includes rerecognition of one of said utterances against a list of possible utterances.
  - 4. The method of claim 3 further including ranking said list of possible utterances based upon how closely each of the possible utterances corresponds to said one of said utterances.
- 5. The method of claim 1 further including creating an hypothesized list of possible utterances that relate to at least one of said recognized utterances based on said stored information.
  - 6. The method of claim 5 further including ranking a list of possible utterances based upon how closely each of the possible utterances corresponds to one of said utterances and comparing said ranked list of possible utterances to said hypothesized list of possible utterances for commonality between said lists.
  - 7. The method of claim 1 further including creating an hypothesized list of possible utterances that relate to at least one of said recognized utterances based on said stored information.
- 8. The method of claim 1 further including creating a list of possible utterances that could be confused with at least one of said recognized utterances.
  - 9. The method of claim 1 wherein said recognized first utterance is recognized continuously.
  - 10. The method of claim 1 wherein said recognized second utterance is recognized discretely.
  - 11. The method of claim 9 further including creating a list of possible first utterances that may be confused with said recognized first utterance.
- 12. The method of claim 11 further including creating an hypothesized list of possible second utterances that relate to said possible first utterances based on said stored information.
  - 13. The method of claim 12 further including adding said recognized second utterance to said hypothesized list of possible second utterances to create a merged list of possible second utterances.
- 14. The method of claim 13 further including rerecognizing said merged list of possible second utterances against said second utterance to get a ranked list of possible second utterances, said ranking based upon how closely each possible second utterance in said merged list corresponds to said second utterance.
- 15. The method of claim 14 further including comparing said ranked list of possible second utterances to said hypothesized list of possible second utterances for commonality between said lists. said highest ranked possible second utterance in said ranked list being compared first.
  - 16. The method of claim 15 further including creating an hypothesized list of possible first utterances from said second recognized utterance based on said stored information.
  - 17. The method of claim 16 further including adding said recognized first utterance to said hypothesized list of possible first utterances to create a merged list of possible first utterances.

- 18. The method of claim 17 further including rerecognizing said merged list of possible first utterances against said first utterance to get a ranked list of possible first utterances having a ranking based upon how closely each possible first utterance in said merged list corresponds to said first utterance.
- 19. The method of claim 18 further including evaluating a possible first utterance ranked second in said ranked list of possible first utterances by determining whether a distance parameter associated with said second ranked possible first utterance is within an acceptable limit.
- 20. The method of claim 19 further including indicating to a user when said second ranked possible first utterance is not within said acceptable limit and no commonality exists between said ranked list of possible second utterances and said hypothesized list of possible second utterances.
  - 21. The method of claim 1 wherein said first utterance comprises a zipstate and said second utterance comprises a city from a destination address on a package, said determination of the most probable first and second utterances resulting in the sorting of said package according to the package's destination address.
  - 22. The method of claim 1 wherein said first utterance comprises a word and said second utterance comprises spelled prefix including ordered symbols.
- 20 23. The method of claim 22 further including creating a list of possible prefixes that could be confused with said recognized prefix.
  - 24. The method of claim 23 wherein creating said list of possible prefixes includes determining, in the context of a preceding symbol or silence, a probability of confusing each recognized symbol in said prefix with each symbol in a list of possible symbols.
  - 25. The method of claim 23 wherein creating said list of possible prefixes includes determining, in the context of a preceding symbol or silence, a probability of confusing each recognized symbol in said prefix with more than one symbol.
  - **26.** The method of claim 23 wherein creating said list of possible prefixes includes determining, in the context of a preceding symbol or silence, a probability of confusing each recognized symbol in said prefix with an absence of a symbol.
- 27. The method of claim 23 wherein creating said list of possible prefixes includes replacing a sequence of symbols with a single symbol.

- 28. The method of claim 22 wherein said first utterance comprises a spelled word and said determination of the most probable first and second utterances results in recognizing said spelled word.
- 29. A method of generating a choice list from a continuously recognized utterance comprising:
  - recognizing a spoken utterance, consulting stored information to determine the probability of confusing possible utterances in the stored information with said recognized utterance, and producing a list of possible utterances from the stored information that could be confused with the recognized utterance.

- 30. The method of claim 29 further including rerecognizing said utterance against a merged list of said list of possible utterances and said recognized utterance to create a ranked list of possible utterances having a ranking based upon how closely each utterance in said merged list corresponds to said spoken utterance.
  - 31. A method of recognizing ambiguous inputs including:
- recognizing a first ambiguous input.
  recognizing a second ambiguous input having information that is related to said first ambiguous input, and determining the most probable first and second ambiguous inputs based on stored information about valid relationships between possible first and second ambiguous inputs.

15

25

30

40

45

32. A method of training a speech recognizer, comprising:
 prompting a user to make a first utterance comprising symbols.
 recognizing said symbols, and
 calculating the probability of confusing each recognized symbol with the prompted symbol.

- **33.** The method of claim 32 wherein said probabilities are calculated within the context of the preceding symbol or silence.
- 10 34. A method of displaying word choices during speech recognition, comprising:

recognizing an uttered word, recognizing a spelling of a prefix of the word, whereby symbols are used to spell said prefix, and displaying a list of word choices on a screen for selection, a top choice on the list corresponding to a highest ranked choice.

- 35. The method of claim 34 wherein said symbols comprise letters, digits, and punctuation.
- 36. The method of claim 29 wherein said spoken work is recognized continuously.

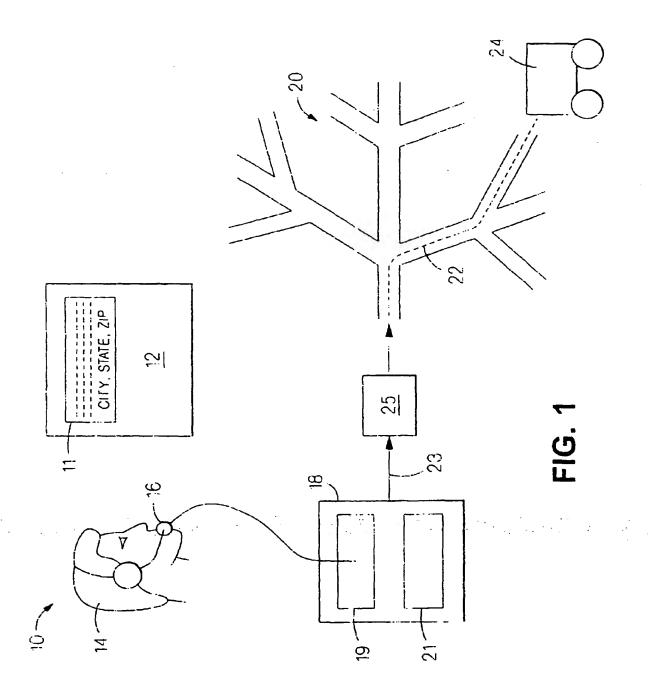

35. 36. 20 25

### (54) Speech recognition

(57) A method of speech recognition includes recognizing a first utterance, recognizing a second utterance having information that is related to the first utterance, and determining the most probable first and second utterances based on stored information about valid relationships between possible first and second utter-

ances. The recognized first utterance may be recognized continuously and the recognized second utterance may be recognized discretely. The determination of the most probable utterances may include creating a list of possible utterances that could be confused with a recognized utterance and rerecognition of a list of possible utterances against an utterance
